

TEXART™ RT-640 DYE-SUBLIMATION PRINTER

Simply brilliant.

Exceptional sublimation performance and value.

A Rapidly Growing Market

Sportswear, décor, Point-of-Sale (POS) displays, trade show exhibits and a wide range of promotional products are just a few of the many opportunities available in dye sublimation printing. The Roland Texart RT-640 dye-sublimation printer was designed to provide superb quality, productivity and value with ease of use. Take a close look at the stunning output, then add up all the innovative features and we think you'll agree: the RT-640 is simply brilliant.

It All Starts With the Ink

Roland's new Texart dye sublimation ink delivers bold, vibrant color, deep, rich blacks, subtle gradations and remarkably fine details. The RT-640 can be configured as a four-color or eight-color device. In four-color (CMYK) mode, low-VOC Texart ink produces bright colors with velvety blacks, improved gray scale and high quality, detailed output. In eight-color (CMYKLCmOrVi) mode, the addition of Orange and Violet ink produces an increased color gamut with exceptional reds, oranges, deep blues and purples, while Light Cyan and Light Magenta provide subtle gradations and beautiful skin tones.

The new Roland bulk ink system includes airtight sealed one liter pouches. The proprietary Roland Ink Switching System automatically switches to the backup ink pouch when the primary pouch runs out. Further expediting production, you can replace an empty pouch without stopping the printer.

Every Detail Has Been Optimized for Exceptional Output, Performance and Value

An advanced, eight-channel print head contains 180 nozzles per channel capable of producing seven different droplet sizes for smoother gradations and denser color.

Texart ink is approximately 15% less expensive per liter than conventional inks, yet provides outstanding color reproduction. The ink waveform and maintenance sequence control technology deliver optimum output and print quality. The RT-640 also includes a newly designed media feed adjuster at the front and back of the printer that prevents skewing when running transfer paper media at high speeds. Enhanced vacuum power keeps paper flat for printing.

Powerful ErgoSoft Roland Edition RIP Included

ErgoSoft Roland Edition is a special edition RIP developed exclusively for Roland by ErgoSoft, the premier RIP provider in the sublimation market. Support for both 8-color and 4-color printing is provided and it includes numerous features especially for sublimation production that combine excellent high-speed RIP throughput, image quality and productivity.

Roland Productivity Features Included

The RT-640 comes with a host of features that boost productivity. The newly developed feed adjuster combined with an included take-up system facilitates precision unattended printing. The TU-3 take-up system combines a convenient front-mounted roller and an advanced tension controlled take-up unit for optimum media feeding and tracking. With Roland Printer Assist, you can manage your RT-640 remotely when you're in the office using an iPad tablet, allowing you to control common printer operations such as test printing and cleaning functions.

PRODUCT HIGHLIGHTS

- 64" integrated dye sublimation printer
